

VENUE

Hyderabad International Convention Centre (HICC) is a pillar-free internal hall of net 6,480 sq. meters which can be partitioned into six halls in an open capacity, which can hold up to 400 tables in Banquet setting and 6000 in cocktail. The pre function foyer area also exceeds 6500 sq meters in addition to this internal space. The Centre has mobile operable walls, which when expanded accommodates up to 5000 people. The mobile operable walls are soundproof, built in the US and have been covered with Teak and Silk. They are not only sound proof but they also create an ambience of a Five Star Ball room.

The main hall has an inbuilt rear projection screen of about 18 feet by 16-foot screen capacity along with the latest sound systems built into the roof to provide a complete concert-like experience on a flick of a switch. The main hall's roof has been built in such a way that it includes the following:

- Dimmable halogen lights across the entire facility.
- North, South, East and West cat walking facility at 6 meters and 18 meters.
- Has three levels with a fixed seating of 650 on level 1 and eight Interpreter/corporate lounges and two Audio/Visual control systems which overlook the main stage.
- The roof is fitted with catwalks and truss to withhold heavy weight for suspension of large physical items. This is to include a full exhibition mode as well as Convention mode.
- To further enable the exhibition mode at the main hall, the floor has been provided with pits with facility of power, water, outflow/waste, cables and phone lines across the entire 6400 sq. meters.
- Whilst the clear roof is 12.5 meters in height, the roof height above the catwalk is 14.1 meters
